

KAREMOPS.AI · FIELD GUIDE

The 3 Claude Code routines I'd set up first.

If I had to rebuild my business from zero this week, these are the first three things I'd schedule. Not theory. Real prompts. Real cadence. Real stack.

INSIDE

Three Claude Code Routines that handle daily money tracking, inbox triage, and weekly content + competitor intel — running on cron without you. Built for the Karemops stack.

What just changed.

Anthropic shipped Routines, Outcomes, Dreaming, Multi-agent orchestration, and Webhooks at Code with Claude SF. All in public beta or research preview. All today.

Here's the part business owners are missing: **Routines** turn Claude Code from "the thing I open when I need help" into **scheduled work that runs on its own**. Cron-style. Webhook-triggered. No babysitting.

Pair that with **Outcomes** — the agent grades its own work against your rubric and iterates until it hits the standard — and you stop reading 40 drafts to find the one that's usable.

The gap just doubled. If you're still copy-pasting prompts into a chat box, you're 18 months behind. The people who set up routines this month compound for the rest of the year.

What you need to run these

- Claude Code installed (Pro, Max, Team, or Enterprise plan)
- Routines feature enabled (currently public beta — auto-on for most accounts)
- API access to your stack: Gmail, Stripe, GoHighLevel, Airtable
- 30 minutes the first time. Zero minutes after.

How a Routine works: You write a Claude Code prompt once. You set a schedule (cron) or a trigger (webhook). Claude runs it on time, every time, and pings you when it's done.

The Daily **Money** Dashboard.

Every morning at 7:30am, before you've had coffee, you already know exactly what your business made yesterday, what it spent, and what's bleeding.

Schedule 0 7 * * *

Stack Stripe · GoHighLevel · Meta Ads · Slack

Time saved ~25 min/day

What it does

- Pulls yesterday's revenue from Stripe (gross + net + refunds)
- Pulls active pipeline value + new leads from GoHighLevel
- Pulls ad spend + ROAS from Meta Ads MCP
- Posts a 5-line summary to your Slack or email — green/red flags only

The prompt to drop into the routine

Pull yesterday's data and post a daily money summary.

1. Stripe: gross revenue, refunds, net, # of transactions
2. GoHighLevel: new leads, active pipeline \$ value, deals closed
3. Meta Ads: total spend, ROAS, top campaign by spend
4. Compare each metric to the trailing 7-day average
5. Flag anything more than 20% off baseline

Post the summary to my Slack #money channel.

Format: 5 lines max. Numbers first, commentary second.

Do not include filler or headers. Use the Outcome rubric:

"Could a busy founder read this in 15 seconds and know what to do?"

Why this one first: 90% of business owners don't actually know their numbers daily. They check Stripe at the end of the month. By then the leak's been bleeding for 30 days.

Inbox triage + draft replies.

Every 4 hours, Claude reads your inbox, sorts what matters, and drafts replies to the emails that actually move money. You walk in, review, hit send.

Schedule 0 */4 * * *

Stack Gmail · GoHighLevel

Time saved ~2 hr/day

What it does

- Scans Gmail for new threads since last run
- Categorizes: **brand deal** · **lead** · **client** · **noise**
- Drafts replies for brand deals + leads (saved as Gmail drafts, not sent)
- Pushes lead emails into GoHighLevel as new contacts if they're not already there
- Ignores newsletters, receipts, and noise — doesn't even surface them

The prompt to drop into the routine

Scan my Gmail inbox for new threads since the last run.

For each thread, classify it as one of:

- brand_deal (sponsorship, partnership, affiliate offer)
- lead (someone asking about working with me / Arc Digital / Skool)
- client (active client communication)
- noise (newsletters, receipts, automated)

For brand_deal and lead emails:

1. Draft a reply in my voice (casual-professional, direct, no fluff, reference Karempops.ai when relevant). Save it as a Gmail draft.
2. If lead and not in GoHighLevel, create a contact with name + email + source.

Skip noise entirely. Do not summarize it.

Output: one line per email handled, format:
[CATEGORY] sender — action taken

Why this one second: Inbox is where money dies. Brand deals get cold. Leads ghost. By the time you "get to it," they bought from someone else. This kills that.

Weekly content + competitor intel.

Monday 9am. Claude pulls last week's content performance + scrapes 3 competitors' top performers + spits back 5 topics worth filming this week. All written into Airtable.

Schedule 0 9 * * 1

Stack Airtable · Apify · Instagram · TikTok

Time saved ~3 hr/week

What it does

- Pulls last 7 days of your IG + TikTok posts (views, watch time, saves)
- Scrapes top 5 performers from each of your 3 competitors via Apify
- Identifies hook patterns + topic gaps your competitors are hitting and you're not
- Writes 5 ranked content topics for this week into the [Content Pipeline](#) Airtable
- Flags any post of yours from the last 7 days that's about to go viral so you can boost it

The prompt to drop into the routine

Run a weekly content + competitor performance review.

1. Pull my last 7 days of posts from Instagram + TikTok via the content analysis Airtable. Rank by views, then watch time.
2. Scrape the top 5 posts from the last 14 days for each competitor listed in the Competitors Airtable, using Apify.
3. Find: which topics or hook angles are competitors winning with that I haven't tried this month?
4. Write 5 content ideas for this week into the Content Pipeline table with: hook, topic, format (short-form / carousel / long-form), why it'll work in one sentence.
5. Flag any of MY posts from the last 7 days with above-average engagement and recommend boosting.

Use the Outcome rubric: "Would Kareem actually film these this week?"
Reject ideas he's already done in the last 90 days.

How to **install** these.

Routines live inside Claude Code. Here's the 30-second install for any of the three above.

1. Open Claude Code

- Type `/routines` in any Claude Code session
- Pick **Create new routine**

2. Paste the prompt + set the schedule

- Drop in the prompt from this guide
- Set the cron schedule shown on each routine page (or use a webhook trigger if you'd rather fire on event)
- Name it: `money-dashboard` / `inbox-triage` / `weekly-content`

3. Wire your tools

- Gmail, Slack, Airtable, Stripe, Meta Ads — all connect via MCP
- If you don't have the MCPs installed yet, ask Claude: *"install the [tool] MCP"* and follow the prompts

Pro move: Wrap each routine in an Outcome rubric. The agent grades its own output before it ships. You go from 40 drafts to 1 usable result. +10% success rate on Anthropic's internal benchmarks. More on the hard tasks.

That's the **whole** thing.

Three routines. Roughly 6 hours a week back. The compounding part is the one nobody talks about: every routine you ship makes the next one easier, because Claude's **Dreaming** feature pulls patterns from past sessions and gets sharper with use.

Set these up this week. By next month you won't remember how you ran a business without them.
