

KAREMOPS.AI · FIELD GUIDE

Post to **5** platforms a day from one Claude Code command.

Late + Claude Code + the /post-content skill. One video in. Instagram, TikTok, LinkedIn, YouTube, X out. No Buffer. No scheduler. No VA.

INSIDE

Get a Late account, connect your socials, install the Late MCP into Claude Code, and run /post-content. The whole publish loop — transcribe, caption per platform, schedule, ship — runs from one prompt.

What this **actually** is.

One tool (Late) connects all your socials. One MCP install lets Claude Code talk to Late. One skill (/post-content) runs the whole publish loop end-to-end.

You stop logging into five apps. You drop a video file. Claude transcribes it, writes platform-specific captions (because TikTok ≠ LinkedIn), and posts. Done in under two minutes.

Heads up — Late actually publishes. Wrong caption, broken link, scheduled at 3 AM — that's all live. Always preview the draft Claude generates before approving the publish step.

What you can do once it's connected

- Post one video to IG Reels, TikTok, LinkedIn, YouTube Shorts, and X — same prompt
- Get a custom caption per platform (no copy-paste, no character-limit panic)
- Schedule, queue, or fire immediately — your call
- Re-post old winners with a fresh caption in one line
- Pull post analytics back into Claude to brief your next video

What you need before we start

- A **Late account** (free tier works to test)
- Your social accounts ready to auth: **IG (Business or Creator), TikTok, LinkedIn, YouTube, X**
- **Claude Code** installed (this is the whole point — never call it "Claude bot")
- One short-form video you actually want to post (test run = real run)

IG needs a Business or Creator account linked to a Facebook page. If you're still on a personal IG, fix that first — it takes 2 minutes in the IG app.

STEP 01

Get a **Late** account.

One tool that posts to every platform you care about. Sign up takes 60 seconds.

1. Hit **getlate.dev**

Go to getlate.dev. Sign up with Google or email.

2. Create a workspace

One workspace per brand. Name it whatever you want — this is where every post lives.

3. Grab your API key

Settings → Developer → generate a personal API key. Copy it. You'll paste it once in Step 03.

STEP 02

Connect your **socials**.

Inside Late, hit **Connect Account**. Auth each platform once. Done in 2 minutes.

Connect order (do these top to bottom)

1. Instagram (Business/Creator account — needs a linked FB page)
2. TikTok (Personal or Business both work)
3. LinkedIn (Personal profile OR company page — your call)
4. YouTube (Channel auth via Google)
5. X (OAuth — takes ~10 seconds)

Verify

Late dashboard → Accounts tab → 5 green dots.
If any are red or "Re-auth needed," fix it now. The MCP won't recover later if a platform is half-connected.

Wire Late into Claude Code.

One command. Claude can now read your Late workspace and create posts.

Install + auth in one shot

```
claude mcp add late  
# Paste the API key from Step 01 when prompted.
```

No restart needed — MCPs hot-load. To confirm: open any Claude Code session and ask `list my Late accounts`. Expect 5 platforms back. If you get zero, the key didn't paste cleanly — run `claude mcp list` and re-add.

Run /post-content.

This is the whole point. One command. Five platforms.

The minimum prompt

```
/post-content video.mp4
```

Claude transcribes the video with Whisper, writes a custom caption per platform, shows you the draft, and on approval ships it to Late. Late publishes to IG, TikTok, LinkedIn, YouTube, and X.

01 · Post now with your own hook

```
/post-content video.mp4
```

Use this hook for all 5 captions: "I stopped paying a VA \$800/mo. Here's why."

02 · Schedule for tomorrow 9 AM, skip X

```
/post-content video.mp4 schedule="tomorrow 09:00"
```

```
platforms="ig,tiktok,linkedin,youtube"
```

Stagger posts by 5 minutes so the algos don't cross-pollinate.

03 · Repost your winners

Find my top 3 Reels from the last 30 days.

Rewrite the hooks. Re-queue to Late for next week, one per day at 10 AM.

§ RESOURCES

The actual links

- Late → getlate.dev
- Claude Code → claude.com/claude-code
- Late docs (MCP) → getlate.dev/docs/mcp

That's the **whole setup.**

Late connected. MCP installed. /post-content live. You can post to IG, TikTok, LinkedIn, YouTube, and X from one Claude Code command.

This replaces the part of the week where you spent 4 hours cross-posting, re-formatting captions for each platform, and forgetting to publish on X. Now it's 90 seconds.

If this hit, send it to one other business owner who's still doing it manually — or paying someone \$800/mo to do it manually. They'll thank you.
