

AI Ads & Content Systems

with Claude Code

AI-POWERED ADS. CONTENT THAT CONVERTS.
SYSTEMS THAT SCALE.

KAREMOPS.AI · FIELD GUIDE

The Anthropic course library.

Every free Anthropic course, every certificate, and how to use them to land the most in-demand non-technical AI job in 2026.

INSIDE

All 16 free courses sorted by track. Two paths through — Path A (just courses) and Path B (courses + proctored cert). The Amazon Bedrock receipt. The exact 4-step LinkedIn add flow. A 7-day plan you can start tonight.

KAREM ALMOAYYAD

@KAREMOPS.AI

A job that didn't exist 18 months ago.

AI Agent Manager. Chief Agent Officer. AI Operations Lead. Agentic Workflow Manager.

Different titles, same role. Companies are paying up to \$300K for it, and Forbes is explicit: the people getting hired don't have CS degrees.

What they have is judgment. They deeply understand one business function and they know how to direct AI agents to do parts of it. The other half — the AI side — is exactly what Anthropic just put online for free.

The gap that explains the pay. Deloitte's 2026 State of AI: 85% of large companies are deploying AI agents. Only 21% have any governance over them. Someone has to translate between the business and the agents. That translator is now a paid position.

16 courses. 13 certs. All free.

Lives at anthropic.skilljar.com. Every course ends with a completion certificate issued by Anthropic via Skilljar. You don't need all of them — pick the path that fits your goal.

FOUNDATIONS

- Claude 101 — the no-prereq starter
- AI Fluency: Framework & Foundations — the conceptual frame

BUILDER TRACK

- Claude Code 101 — Claude in your terminal
- Claude Code in Action — real workflows
- Building with the Claude API — production integration patterns

AGENT STACK

- Intro to MCP — the agent-to-tool standard
- MCP Advanced Topics · Intro to Agent Skills · Intro to Subagents

PLATFORM · COWORK · EDUCATION

- Claude with Amazon Bedrock · Claude with Google Cloud Vertex AI
- Intro to Claude Cowork
- AI Fluency for Educators · Students · Nonprofits · Teaching AI Fluency

The Amazon Bedrock receipt.

The strongest single credibility signal in the whole library is the *Claude with Amazon Bedrock* course. Anthropic's own description literally reads "first-of-its-kind training built for AWS employees."

Translation: the same course Anthropic built for one of the largest cloud customers on the planet is sitting on a public URL with no paywall. The credential lands the same on a hiring manager's screen as it does on an Amazon engineer's. Take it.

anthropic.skilljar.com/claude-in-amazon-bedrock

One weekend. 99th percentile.

8 to 12 hours of focused study and you are ahead of 99% of people at your company on Claude. No exam. Just six courses in this order:

Time 8–12 hrs

Exam none

Certs 6

- **01 · Claude 101** — even if you've used Claude, the structured intro covers patterns the rest assume.
- **02 · AI Fluency: Framework & Foundations** — the conceptual layer that makes the others click.
- **03 · Claude Code 101** — where the operator path starts paying off in real productivity.
- **04 · Intro to MCP** — skip this and you hit a wall the second you try to ship anything real.
- **05 · Intro to Agent Skills** — turns you from a Claude user into a Claude operator. Operators stack skills.
- **06 · One platform integration** — Bedrock or Vertex AI. Whichever your company runs.

Build while you learn. Pick one workflow at your job and build a Claude version of it as you go. Ship it before you finish the courses. A real working agent beats a 100% completion rate every single time.

The proctored cert.

Anthropic also runs a certificate-only assessment for AI Fluency. 60 questions, 2 hours, webcam on. Real scenarios — designing a customer support agent, wiring Claude into a deployment pipeline. Not trivia.

anthropic.skilljar.com/certificate-only-ai-fluency-frameworks-foundations/321670

How to run Path B

- **01 · Do Path A first.** Exam tests scenarios, not trivia. A real project is the fastest way to pattern-match.
- **02 · Build one real project.** Workflow at your current job. Document time saved.
- **03 · Take the proctored assessment.** 60 Qs, 2 hrs, webcam on. Retake if you fail.
- **04 · Add it everywhere.** LinkedIn headline, resume top section, email signature, internal Slack. This is the credential that gets past the first screening filter at most Fortune 500s.

Don't oversell. You don't have to.

These are completion certificates — you watched the course, passed quizzes. They're not proctored exam credentials like AWS Cloud Certified Architect. The exception is the Path B assessment, which *is* proctored.

Frame them honestly on LinkedIn: "Anthropic-issued completion credential" or "Anthropic course with quizzes and full credential." Don't claim hard exam parity. The credibility comes from the issuer (Anthropic) and the platform (the same one Anthropic uses for AWS training) — not exam difficulty.

Why it still hits. A hiring manager scanning LinkedIn for AI Agent Manager candidates doesn't know completion vs. proctored. They see *Anthropic* on the cert. That gets you past the first filter. Your demo project gets you past the second.

The 4-step add **flow**.

Skilljar has an official support article on this. Mechanic is simple — most people miss it because Skilljar buries the credential download.

- **01 · Finish the course.** Complete every module, pass the quiz. Cert generates automatically.
- **02 · Grab the cert URL.** Skilljar issues a unique URL per cert plus a downloadable PDF. Both work for LinkedIn.
- **03 · LinkedIn → Profile → Add section → Licenses & certifications.**
- **04 · Fill the fields.** Name = course title. Issuing org = Anthropic (autocompletes). Credential URL = the Skilljar link. Issue date = your completion date. Skip credential ID and expiration — no expiry on these.

support.skilljar.com/hc/en-us/articles/38190373846413

Course without a shipped project = half a credential.

The role you want is judged on what you've *built*, not what you've watched. Three project patterns, in order:

- **01 · Internal process automation.** Pick something repetitive — weekly reporting, customer triage, content drafting, expense categorization. Build a Claude-powered version. Document the time saved.
- **02 · An agent that talks to one external tool.** Wire Claude into Notion, Gmail, Google Sheets, or your CRM via MCP. Pull data, take action, update systems. This proves you can do real agent work — not just chat with Claude.
- **03 · A multi-step workflow.** Claude has to plan, execute multiple steps, and recover if something fails. This *is* the actual job — managing the agent through a process, not just prompting once.

Record everything. Every project gets a 60-second Loom showing it work. Hiring managers (and your own boss) want to see the agent in motion. Three short demos beat a 20-page case study every time.

Start tonight.

The window for this role is short. Every guide like this one expands the candidate pool. The people who land it are the ones who treat this as a fact, not a maybe.

- **Today.** Sign up at anthropic.skilljar.com — free, 5 minutes. Start Claude 101 tonight. The hour you'd have spent scrolling pays you back forever.
- **This week.** Finish Claude 101. Start AI Fluency: Framework & Foundations. Pick one workflow at your job to Claude-ify.
- **Next week.** Start Claude Code 101 + Intro to MCP. Begin building your first real Claude project. Record a 60-sec Loom when it works.
- **Within 30 days.** Finish Path A (or sit Path B). Add credentials to LinkedIn under Licenses & Certifications. Pitch the agent to your manager.

§ PAYOFF

The translator role.

85% of companies are deploying agents. 21% have any clue how to govern them. The translator between business and agents is now a paid position — and the AI half of that skill set just went free.

Take the first course tonight. Build a project this weekend. The next 12 months are when the openings exist in volume — and the people who treat this as a fact, not a maybe, are the ones who walk into them.

If this hit, send it to one other person who's been watching the AI wave from the sidelines. They'll thank you.

BUILT BY

Karem AlMoayyad

AI operator + educator. I help business owners ship AI systems that actually work — content, ads, automation, ops. Built with Claude Code.
