

KAREMOPS.AI · FIELD GUIDE

Run Meta Ads from a **chat window.**

The exact 5-minute setup I use to run ads from Claude Code instead of clicking through Ads Manager for hours.

INSIDE

Connect Claude or ChatGPT directly to your Meta ad account. Pull reports, audit performance, build campaigns — all from one prompt.

KAREM ALMOAYYAD

@KAREMOPS.AI

What this **actually** is.

Meta dropped an official MCP server for Meta Ads. Translation: Claude and ChatGPT plug directly into your ad account and *do things* — not just talk about them.

You stop being the person clicking 47 buttons in Ads Manager. You start being the person typing one sentence and watching the work happen.

URL mcp.facebook.com/ads

Status **Public Beta**

Setup ~5 min

Heads up — it's in beta. Don't run it on a client's account without their go-ahead. Every write action asks for your confirmation before it fires. Nothing happens behind your back.

What you can actually do from a chat

- Spin up full campaigns (paused, so you review before going live)
- Pull real performance data — ROAS, CPA, CTR, frequency, breakdowns
- Manage product catalogs and fix feed issues
- Diagnose Pixel + CAPI signal quality
- Search Meta's Help Center when something breaks

What you need before we start

- A Facebook account with admin access to your Meta Business Portfolio
- An active Meta ad account inside that portfolio
- **Claude** (Pro, Max, Team, Enterprise) *or* **ChatGPT** (Plus, Pro, Business, Enterprise, Edu)
- 5 minutes

Claude Free works but caps you at one custom connector. ChatGPT Free can't do custom connectors at all — you need Plus minimum.

STEP 01

Grab the MCP URL.

Nothing to download. Meta hosts the server. You just point your AI at it.

```
https://mcp.facebook.com/ads
```

That's it. Now pick your tool below.

STEP 02 · A — CLAUDE

If you're on Claude.

Time ~2 min

Plans Pro · Max · Team · Enterprise

1. Open settings

- claude.ai → profile pic (bottom-left) → **Settings** → **Connectors**

2. Add the connector

- Scroll down → **Add custom connector**
- Name it: `Meta Ads`
- Paste the URL: `https://mcp.facebook.com/ads`
- Click **Add**

3. Connect your Meta account

- Hit **Connect** next to Meta Ads
- Facebook OAuth window opens — log in
- Pick the Business Portfolio + ad accounts you want Claude to touch
- Approve. Green "Connected" badge = you're in.

4. Turn it on in your chat

- New chat → + button → **Connectors**
- Toggle **Meta Ads** on

If you're on ChatGPT.

ChatGPT makes you flip on Developer Mode first. Slightly more friction.

Time ~4 min

Plans Plus · Pro · Business · Enterprise · Edu

1. Turn on Developer Mode

Plus or Pro:

- chatgpt.com → profile pic → **Settings** → **Connectors**
- Scroll → **Advanced settings**
- Toggle **Developer mode** on. Read the warning. Accept.

Business / Enterprise / Edu:

- Admin enables it: **Workspace Settings** → **Permissions & Roles** → **Connected Data Developer mode**

2. Create the connector

- **Settings** → **Connectors** → **Add custom connector** (or **Create** on workspaces)
- Name: **Meta Ads**
- Server URL: **https://mcp.facebook.com/ads**
- Auth: **OAuth**
- Click **Create**

3. Authenticate

- Allow popups on chatgpt.com (otherwise the OAuth window dies silently)
- Log into Facebook with your admin account
- Pick your ad accounts → approve

4. Turn it on in your chat

- New chat → + → hover **More** → toggle **Developer Mode** on
- Select **Meta Ads** from the tools menu

Your first prompts.

Start read-only. Make sure it actually works before you let it touch anything. Replace `act_XXXXXXXX` with your real ad account ID.

01 · Test the connection

```
List all the Meta ad accounts I have access to.  
Show ID, name, and currency.
```

02 · Weekly report in 10 seconds

```
For account act_XXXXXXXX, pull the last 7 days vs the 7 days before.  
Show spend, ROAS, CPA, and the top 3 campaigns by spend.  
Summarize what changed in 3 bullets.
```

03 · Full account audit

```
Audit account act_XXXXXXXX for the last 30 days.  
Find ad sets with frequency over 3, ads with CTR under 0.8%,  
and campaigns burning more than 30% of budget without hitting target ROAS.  
Give me a fix list.
```

04 · Pixel + CAPI health check

Check the signal health for account act_XXXXXXXXX.
Which events have low quality? Is event match quality on Purchase low?
Recommend what to fix first.

05 · Build a full campaign (paused, ready for review)

Create a draft AB0 campaign on act_XXXXXXXXX.
Objective: Sales. Budget: \$100/day.
3 ad sets: broad, lookalike 1%, and 30-day retargeting.
Pull the 4 most recent creatives.
Leave it paused so I can review before launch.

§ PAYOFF

That's the whole setup.

Same one I'm running for ads work right now. Five minutes to set up. Saves you hours every week.

If this hit, send it to one other person who's still living inside Ads Manager. They'll thank you.

BUILT BY

Karem AlMoayyad

AI operator + educator. I help business owners ship AI systems that actually work — content, ads, automation, ops. Built with Claude Code.
